Dear Sir/Madam,

Re: IT Web Developer UK-2023 - Full-time

I would like to apply for a position as an IT Web Developer. As requested, I have attached my CV.

I have wanted to work in IT since I was a teenager. I would like to help our clients achieve the skills they need to function in the digital workplace of the future, today. Nowadays, everyone's life is touched by the internet. I like working in a challenging, fast-paced environment. I have a degree in computing (Bachelor of Science in Computing). I have developed my technical knowledge in this area. I studied Database Driven Web Sites, LAMP, XAMPP, ASP.Net (MVC), Computers Society and Law, E-Business, Information Modelling (ERD). I have learned IT security, variety of Tools, the importance of Quality for professionals, network routing, installation of disks, CISCO systems and disabling viruses. We are investigating how important it is to record and store the evidence file. Those subjects and projects helped me gain lots of knowledge and they improved my problem-solving skills.

I have extensive experience of working successfully as part of a team. I know that interpersonal skills are necessary for successful teamwork. In my role of care assistant, it was important to work collaboratively; to be conscientious and hard working. In addition to this, I had to complete all my tasks to stick to the deadlines. I am keen to be up to date with all the statutory training within the company guidelines. My previous job was demanding, and I have many experiences dealing with people. This is how I know that it is important to empathise with customers. I am always compassionate, and I treat others with respect and dignity. I have the ability to understand an individual's needs in an in-depth way. I believe, all of these skills are also essential to the staff.

Thank you for your time in reading my covering letter. I look forward to hearing from you.

Yours sincerely,

Kyu Kyu Win
